Bob,

It looks like we will have an opportunity to review the RPAC data recently obtained from the Siltronic site before we finalize the data needs for chlorinated herbicides and dioxin during the planned Gasco in-water work. As noted below, we expect this data to be in this month.

Matt McClincy

Subject: FW: GASCO Offshore Sampling

Roger,

Northwest Natural has proposed groundwater sampling offshore of GASCO/Siltronic. DEQ (Matt McClincy and Heidi Blischke) have provided comments on a draft work plan and the scope of the effort will be expanded considerably. We will make the revised GASCO work plan available to you when it is submitted to DEQ. The work will likely be conducted this summer. Several deep offshore borings are proposed and this is an opportunity to collect more data regarding the extent of RPAC groundwater contamination beneath the river.

We'd like to see the Siltronic riverbank data you've collected to date before giving direction, but will likely request SLLI to analyze split samples from this effort for RPAC contaminants of concern. I understand the validated data for the Siltronic bank work will be available in February and request that you provide the validated data to us as soon as it is available (prior to submittal of a source control evaluation document in April).

You may call me or Matt directly if you have questions about the expected scope of the GASCO work.

Tom Roick, Project Manager
